

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An education training management system comprising:
- a terminal for a trainee that can provide an education training course taken by a trainee;
- a terminal for a manager used by a manager of the trainee; and
- a computer for use in training management, the computer being connected to both the terminal for a trainee and the terminal for a manager via a communication line, and which manages lecture information of the trainee,
- wherein the terminal for a trainee includes information communication device that automatically transmits lecture information of the trainee to the computer for use in training management,
- the computer for use in training management includes aggregate storing device that aggregates the received lecture information and stores an aggregate result, and recognition device, connected to the aggregate storing device, that recognizes whether an access is received from the manager of the trainee or not, and the computer selectively provides the aggregate result lecture information of the trainee who is managed by the manager from the lecture information of a plurality of trainees to the terminal for the manager via the communication line based on the recognition result, and
- the terminal for a manager includes reading device that can read the ~~aggregate result~~ lecture information by accessing the computer for use in training management via the communication line.
2. (Original) The education training management system according to claim 1,

wherein a test is set in the education training course for the purpose of checking the level of understanding of the trainee, and

the lecture information includes progress information of the trainee and a result of the test.

3. (Previously Amended) The education training management system according to claim 2,

wherein, the computer for use in training management comprises appropriateness analysis device, connected to the aggregate storing device, that analyzes the appropriateness of the education training course based on the lecture information.

4. (Previously Amended) The education training management system according to claim 2,

wherein, the computer for use in training management comprises understanding analysis device, connected to the aggregate storing device, that analyzes the level of understanding of the trainee with regard to the education training course based on the lecture information.

5. (Previously Amended) The education training management system according to claim 4,

wherein the understanding analysis device transmits analysis results of the level of understanding of the trainee to the terminal for a trainee, and

the terminal for a trainee again provides the trainee with a portion for which his or her level of understanding did not reach a predetermined standard.

6. (Previously Amended) The education training management system according to claim 1,

wherein the lecture information includes progress information of the trainee, and

the computer for use in training management comprises,
an e-mail delay transmission device, connected to the aggregate storing device, that transmits an e-mail of delay notification to e-mail addresses of the trainee and the manager based on the progress information if the time spent on the lecture exceeds a previously set time.

7. (Previously Amended) The education training management system according to claim 1,

wherein the lecture information includes progress information of the trainee,
and

the computer for use in training management comprises,
a demanding e-mail transmission device, connected to the aggregate storing device, that transmits an e-mail demanding notification to e-mail addresses of the trainee and the manager based on the progress information in the case where the number of days spent on the lecture exceeds a previously set number of days.

8. (Original) The education training management system according to claim 1,
wherein one or a plurality of the education training courses is provided,
each education training course is constituted of a plurality of chapters, each chapter being constituted of one or a plurality of sections, and
the computer for use in training management manages the lecture information of every chapter and every section in every education training course.

9. (Original) The education training management system according to claim 8,
wherein the terminal for a trainee provides the trainee with a test at least at every chapter or every section, refuses to provide the trainee with the next chapter or section when the test result does not reach a passing standard, and again provides the trainee with a chapter or the section for which the test result did not reach a passing standard.

10. (Previously Amended) The education training management system according to claim 1,

wherein the communication line is the Internet, and
the computer for use in training management communicates, as a Web server, with the terminal for a trainee and the terminal for a manager with the Internet.

11. (Original) The education training management system according to claim 1, wherein the terminal for a trainee provides the education training course created by a multimedia document.

12. (Original) The education training management system according to claim 1, wherein the computer for use in training management transmits the education training course created by a multimedia document to the terminal for a trainee.

13. (Original) The education training management system according to claim 1, wherein the education training course provides the trainee with education and training for techniques and skills with regard to maintenance and inspection of an apparatus.

14. (Original) The education training management system according to claim 13, wherein the apparatus is a processing apparatus used in semiconductor manufacturing.

15. (Previously Amended) The education training management system according to claim 1,

wherein the computer for use in training management gives the manager authority to enable a change of lecture contents of the trainee, and changes the lecture contents, according to the instruction of the manager with authority.

16. (Previously Amended) The education training management system according to claim 1,

wherein the computer for use in training management, when the contents of the education training course are changed, provides the terminal for a trainee of the trainee who needs to take a lecture according to the change and/or the terminal for a manager of the manager who manages the trainee with notification of change or information about the changed contents via the communication line.

17. (Original) The education training management system according to claim 1, wherein the computer for use in training management, when a post or job content of the trainee is changed, provides the terminal for a trainee needs to take.

18-27. (Canceled)

28. (Currently Amended) A method of education training management, comprising the steps of:

providing an education training course for a trainee through a terminal for a trainee;

receiving lecture information of the trainee from the terminal for a trainee via a communication line;

aggregating the lecture information and storing the aggregate results by a computer for use in training management;

recognition whether an access is received from a manager of the trainee or not; and selectively providing the aggregate result lecture information of the trainee who is managed by the manager from the lecture information of a plurality of trainees to a terminal for the manager via a communication line based on the recognition result.

29. (Original) The method of education training management according to claim 28,

wherein a test for checking the level of understanding of the trainee is set in the education training course, and

the lecture information includes progress information and a result of the test of the trainee.

30. (Original) The method of education training management according to claim 29,

wherein the step of storing the aggregate result includes a step of performing analysis regarding appropriateness of the education training course based on the lecture information.

31. (Previously Amended) The method of education training management according to claims 29,

wherein the step of storing the aggregate result includes a step of performing analysis regarding the level of understanding for the education training course based on the lecture information.

32. (Original) The method of education training management according to claim 31,

wherein the step of performing analysis regarding the level of understanding transmits the analysis result for the level of understanding to the trainee, and

the step of providing the education training course, based on the analysis result, again provides the trainee with a portion, in which his or her level of understanding did not reach a predetermined standard, within the education training course.

33. (Original) The method of education training management according to claim 28,

wherein the lecture information includes progress information of the trainee, and

comprising the step of transmitting an e-mail message of delay notification to e-mail addresses of the trainee and the manager from the computer for use in training

management if the time for taking a lecture exceeds a previously set time based on the progress information.

34. (Original) The method of education training management according to claim 28,

wherein the lecture information includes progress information of the trainee, and

comprising the step of transmitting an e-mail message for demanding to e-mail addresses of the trainee and the manager from the computer for use in training management if the number of days spent on a lecture exceeds a previously set number of days based on the progress information.

35. (Original) The method of education training management according to claim 28,

wherein one or a plurality of the education training courses are provided, each education training course is constituted of a plurality of chapters that are constituted of one or a plurality of sections, and

the step of storing the aggregate result manages the lecture information for every chapter and every section for each education training course.

36. (Original) The method of education training management according to claim 35,

wherein the step of providing the education training course provides the trainee with the test at least every chapter or every section,

refuses to provide the next chapter or section to the trainee if the result of the test does not reach a passing standard, and

again provides the trainee with the same chapter or section in which the trainee does not reach a passing mark.

37. (Previously Amended) The method of education training management according to claim 28,

wherein the communication line is the Internet, and
the computer for use in training management, as a Web server, communicates with the terminal for a trainee and the terminal for a manager with the Internet.

38. (Original) The method of education training management according to claim 28,

wherein the step of providing the education training course provides the education training course created by a multimedia document.

39. (Original) The method of education training management according to claim 28,

wherein the education training course provides the trainee with education and training of techniques and skills regarding maintenance and inspection of an apparatus.

40. (Original) A method of education training management according to claim 39, wherein the apparatus is a processing apparatus used for manufacturing semiconductors.

41-42. (Canceled)

43. (Currently Amended) A method of education training for a trainee who takes education training provided by a terminal for a trainee, comprising the steps of:

receiving an education training course from a computer for use in training management that manages lecture information of the trainee; and

transmitting the lecture information to the computer for use in training management via a communication line,

wherein the lecture information to be transmitted to the computer for use in training management is readable by a terminal for a manager of the trainee via a

communication line when an access of the manager is recognized by the computer for use in training management and the computer selectively provides the lecture information of the trainee who is managed by the manager to the manager from the lecture information of a plurality of trainees which are stored in the computer.

44. (Currently Amended) A method of education training management for a trainee who takes an education training course, comprising the steps of:

transmitting identification information of a manager of a trainee to a computer for use in training management that manages lecture information of the trainee by using a terminal for a manager via a communication line; and

reading lecture information stored in the computer for use in training management when an access of the manager is recognized by the computer for use in training management by transmitting identification information of the manager and the computer selectively provides the lecture information of the trainee who is managed by the manager to the manager from the lecture information of a plurality of trainees which are stored in the computer.

45-50. (Canceled)

51. (Currently Amended) A computer for use in training management, connected to a terminal for a trainee who takes an education training course and a terminal for a manager of the trainee with a communication line, that manages lecture information of the trainee, the computer for use in training management comprising:

aggregate storing device that aggregates the received lecture information from the terminal for a trainee via the communication line and stores the aggregate result; and

recognition device, connected to the aggregate storing device, that recognizes whether an access is received from the manager of the trainee or not, and the computer selectively provides the aggregate result lecture information of the trainee who is managed by

the manager from the lecture information of a plurality of trainees to the terminal for the manager via the communication line based on the recognition result.

52. (Currently Amended) A terminal for a trainee who takes an education training course, connected to a computer for use in training management that manages lecture information of the trainee via a communication line, that can provide an education training course taken by the trainee, the terminal for the trainee comprising:

display that displays the education training course; and

information communication device that automatically transmits lecture information of the trainee to the computer for use in training management via the communication line,

wherein the lecture information is being aggregated and stored in the computer for use in training management, and ~~provided~~ the computer selectively provides the lecture information of the trainee who is managed by the manager from the lecture information of a plurality of trainees to the terminal for a manager who manages the trainee via a communication line when an access of the manager is recognized by the computer for use in training management.

53. (Currently Amended) A terminal for a manager who manages a trainee who takes an education training course, connected to a computer for use in training management that connected to a terminal for a trainee and manages lecture information of the trainee via a communication line, comprising:

reading device that reads an aggregated lecture information of the trainee from the computer for use in training management via a communication line when an access of the manager is recognized by the computer for use in training management the computer selectively provides the lecture information of the trainee who is managed by the manager to the manager from the lecture information of a plurality of trainees; and

C1

display that displays the ~~aggregated~~ selected lecture information.
